Don't just take our word for it "This is a great resource; very usefull for those of us who are on the other side of the fence - new to Silverlight and the XNA framework. " "The documentation was excellent and it was easy to follow a user guide

What's New in the Silverlight Controls?

Silverlight Controls is a suite of several components that have a special place in the programming process in the framework of Microsoft Silverlight and enables you to develop a number of web-based applications in a more visual manner. The suite is made of rich controls that make designing and packaging a web application more convenient. The suite covers a wide range of data and image-based controls that can help you present complex data to the users in a more visually appealing manner. The controls can also give you a hand with parsing data from the application and creating dynamic charts for your Silverlight application to show the data in a fluid manner. However, the most important element of this framework is the control that enables you to create and control many of the tools and dialogs involved in the development. For example, one can easily create a dialog that can highlight, comment or show a particular part of the code via the MarkupControlEditor control. Moreover, one can also utilize the ReportDesigner control to design and report from a data in a more visual manner. Further, you can use the ColorPickerControl to select and control the color values and the EffectsControl to apply effects on your controls. However, if you require a more complex controls then you should consider using the ImageEditorControl to create images in the web-based application. In addition to its rich components for creating data and image-based controls, the suite can also help you perform tasks, such as parsing and presenting data from the application and provide you with several view controls that can give you a hand with presenting the data in the application in a fluid manner. Visual Studio 2005 compatibility Silverlight Controls is compatible with the Silverlight SDK that is available in Visual Studio 2005. On the other hand, Silverlight Controls can also be used as a development and testing tool in Visual Studio 2008 in the context of Microsoft Silverlight 1.1. Features: Rich and robust control suite that can allow you to design and create awesome web-based applications in the framework of Silverlight Controls that are created with innovative vector-based tools for editing, creating and controlling data The controls also enable you to create a huge variety of charts for your app that can be used to present complex data to the users in a fluid manner Components that can be utilized for parsing data such as the ColorPicker control that can help you to select a color from a specified code The controls enable you to edit data using

various kinds of barcodes as the View BarcodeControl One can
